- Depression • Poor sleep • Panic attacks • Obsessional behaviours (OCB) • Addictions • Fears & phobias • PTSD & trauma • Bereavement • Irritable bowel syndrome • Weight control • Pain management • Tinnitus • Improve your sport performance • Exam pressure and many more...

A patch test will be required 24 hours before tinting or lash-lift. Tinting darkens the lashes or brows to give definition; colours available are black, brown, or blue.

Lash-lift gently lifts and straightens, or curls your natural lashes, providing a significant beauty enhancement to the eye area. The addition of tinting gives the illusion of eyelash length, the eyes appear more open and results in a more awake and youthful appearance. The results can last 6-8 weeks.
